Shubham Gulati
Senior Associate Consultant
Email: shubhamgulatimca@gmail.com
Mobile: (+91) 9696919563, 6304508068

Professional Summary:

- Around 10+ years of IT experience as a DevOps engineer with expertise in areas of **Software Configuration Management**, **Version Control**, **Build** and **Release management.**
- AWS certified solutions architect associate level.
- Experienced in branching, tagging and maintaining the version across the environments using **SCM** tools like **GIT**, **Bitbucket**, **Subversion** (SVN) **on Linux** and **windows** platforms.
- Extensively worked on Continuous Integration and deployment using various CICD Tools like **Jenkins, Nexus, Jfrog, Ansible, Docker.**
- Having experienced in **Databricks tool** with AI/ML journey.
- Setup monitoring tool Granfa dashboard with Prometheus.
- Highly skilled at supporting web and application servers (**Apache**, **Nginx**)
- Proficient in **Python** programming language, with 4+ years of hands-on experience for automation tasks like Jenkins automation, Bitbucket Automation and so on.
- Deployed application packages on to the **Apache Tomcat server**. Coordinated with software development teams and QA teams.
- Continuous Integration/Continuous Deployment (CI/CD) with **Terraform.**
- Proficient in using Terraform for infrastructure as code.
- Implemented and maintained robust governance frameworks to ensure compliance with industry regulations and best practices.
- Developed and executed comprehensive disaster recovery plans, minimizing downtime and ensuring business continuity during unforeseen events.
- Proactively monitored system performance, identified bottlenecks, and implemented measures to enhance scalability.
- Extensive experience in planning and executing comprehensive disaster recovery strategies to minimize downtime and maintain business continuity.
- Expertise in managing of library versions and deprecated code, Design and sequencing of automated builds& test runs and Troubleshooting expertise – **build failures** due to dependencies, tests, etc
- Experienced with log monitoring tools like **Nagios**, **AWS Cloudwatch** and **CloudTrail**.
- Developed **AWS Cloud Formation** templates to create custom sized **VPC, subnets, EC2 instances, ELB, Security Groups.**
- Expertise in architecting and deploying of fault tolerant, cost effective, highly available and secure servers in **AWS.**
- Experience with **Scrum** and **Agile** Environments for regular cadences of work.
- Created various web apps for administering the extract of files and storing it in Amazon **S3** storage.
- **Configuring Replication** (Merge, Transactional & Snapshot) to replicate data to regional and remote servers and troubleshooting Replication issues.
- Extensive experience in building & deploying **EAR, WAR, JAR** files on test, stage & production servers.
- Proficient with container systems like Docker and container orchestration like EC2 Container Service, Kubernetes.
- Managed Docker orchestration and Docker containerization using Kubernetes.
- In-depth experience in developing and supporting both production and development environments.
- Migration of the applications to cloud.
- Responsible for analyzing the current setup of the application and preparing assessment report covering all the scenarios and creating the plan for future setup
- Analyze all requirement of the application like memory size, OS and so on.
- Creating the deployment plan of the application which includes the deployment of application to new cloud server with minimum/no downtime and testing the application.
- Selecting the best available cloud solution based on the assessment of the application.
- Creating the new future environment in the cloud based on the Bp policies.
- Modify Cloud Formation Template to create CE (Cloud Environment) for each application.

- Provision Non-Prod Cloud Environment (CE)
- Placement of All relevant requests (Firewall, DB, DNS, Latest Software, Licenses etc.)
- Prepare deployment plan - non-Prod.
- Application DB Migration to DBaaS for Non-Prod (Dev/Test/OAT)
- Application Deployment on the Non-prod (Dev/Test/OAT)
- Web based application code refactoring.
- Raise RFC for bubble testing.
- Performance testing of the application & issue fixing.
- After application is migrated to cloud, initial support of the application is handled by us and later on knowledge transfer is done to existing support team.
- Capable of delivering well documented applications, adhering to quality standards and delivery dates.
- Good experience in working with a team together to deliver best outputs in given time frames.
- Supported the application in production and worked closely with off-shore teams.
- Excellent interpersonal skills, ability to interact with people at all levels.

Technical Skills:

DevOps Tools	Git, Maven, Ansible, Jenkins, Nagios, Docker,K8S, chef, bitbucket, Jfrog, nexuspro, Jira, K8S, Splunk, AppDynamic , Terraform, DataBricks, Grafana, prometheus
Operating Systems	Red Hat Linux, Unix, Windows
Web/Application Servers	Tomcat, Apache, Web logic
Cloud Platforms	AWS
Programming Skills	Shell Script, Python
Design Tools Adobe Technologies	Photoshop, Dreamweaver
Tools	Putty, TOAD, BMC Remedy, WINSCP, Service Now, JIRA, ServiceNow

Academic Credentials:

- MCA - 2015 from United Institute of Management Allahabad, U.P
- BCA and B.Sc -2012 From Allahabad

Professional Experience:

- Working as Senior platform engineer, Adidas India (Sep 2021 to till date).
- Working as Senior IT Engineer, Qualcomm India pvt ltd (March 2021 to Sep 2021).
- Working as Senior Associate Engineer, Infosys Limited (Feb 2019 to Feb 2021).
- Worked as Project Engineer, Wipro Limited (Jun 2015 to Jan 2019).

Projects worked in:

Project # 1:

Project	Adidas Enter Platform
Team	Germany
Role	Cloud and DevOps Engineer
Duration	Sep 2021 to till now

Responsibilities:

- Development on automation and enhancement on code.
- Setup monitoring tool Grafana with Prometheus for infrastructure monitor.
- Collaborated with cross-functional teams to deliver data-driven solutions.
- In Databricks, we utilize the Unity Catalog features enabled at the organization level for our AI/ML journey.
- Developed and maintained Python-based applications, implementing best practices for code quality and efficiency.
- Designed and implemented Databricks environments for large-scale data processing.
- Created automated scripts and tools using Python to streamline repetitive tasks, resulting in increased productivity and time savings.
- Through scripting doing automation tasks like Jenkins automation, Bitbucket Automation and so on.
- Identifies and implement process improvements.
- Participates in Release Management activities.
- Setup Power BI tool and integration with different tools like Jenkins, Azure AD, Bitbucket, Jfrog, Ansible.
- Continuous integration and deployment (CI/CD) with Terraform.
- Experience in creating and managing resources on cloud platforms such as AWS using Terraform.
- Proficient in writing Terraform modules, templates, and scripts for efficient infrastructure management.
- Strong understanding of cloud architecture and infrastructure concepts, as well as experience in designing and implementing infrastructure using Terraform.
- Working on assess risks, develop mitigation strategies, and implement effective controls.
- Managing and optimizing active clusters, ensuring high availability and system performance.
- Proficient in implementing end-to-end data pipelines, optimizing data workflows, and building scalable analytics solutions.

Project # 2:

Project	Qcomm ALM and development
Team	US
Role	DevOps Engineer
Duration	March 2021 to Sep 2021

Responsibilities:

- Managed GIT repositories for branching, merging, and tagging.
- Installed and configured Artifactory tool and created local, virtual repositories.
- Developed Python Scripts for automation purpose. ss
- Creation of different environment as per developer requirement.
- Upgrade tools and environments.
- Worked closely with other testers and developers to improve automated framework (JUnit/Selenium) with bug fixes and feature requests.
- Managing Salesforce environment and set up new environment as well as per project requirement.
- Assists in coordinating release activities.
- Coordinates release activities with the appropriate teams so that the final release is correct and of high quality and packaged in a timely fashion.
- Created Documents processes in confluence as appropriate and keep them up to date us.
- Developed Docker file for different environments.
- Created Docker images as per requirement.

- Used Kubernetes to orchestrate the deployment, scaling and management of Docker Container.
- Experience with container-based deployments using Docker, working with Docker images, Docker Hub and Docker-registries and Kubernetes.
- Used Jenkins pipelines to drive all micro services builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using Kubernetes
- Involved in development of test environment on Docker containers and configuring the Docker containers using Kubernetes.
- Utilized Kubernetes for the runtime environment of the CI/CD system to build, test deploy.
- Created playbooks in Ansible.
- Provides installation test backup by working with Performance Engineering and documentation to ensure a good installation experience for the customer.
- Installing, Configuring, and administering Jenkins CI tool on Linux machines.
- Implemented the setup for Master slave architecture to improve the performance of Jenkins.
- Used JIRA as ticket tracking and workflow tool.
- Validates CD content to ensure labels and objects are accurate and complete.
- Continuous Integration and Continuous Delivery Concepts.
- Written Ansible Scripts for Application Deployment.

Project # 3:

Project	Infosys - Bank Of America
Client	US
Role	AWS and DevOps Engineer
Duration	Sep 2019 to feb 2021

Responsibilities:

- As a DevOps Engineer, work collaboratively with software engineering team to deploy and operate the systems and also help in automating and streamlining the operations and processes.
- Responsible for build and maintain tools for deployment, monitoring and operations, and troubleshoot and resolve issues in our dev, test and production environments.
- Stay current with relevant emerging technologies, assess application to DevOps Support challenges or opportunities determining business benefit and impact.
- Continuous review and improve the DevOps CICD pipeline to ensure seamless end to end process from Build to Deploy across ALL SDLC and Prod environments.
- Used Jenkins pipelines to drive all microservices builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using Kubernetes
- Artifactory management and resolve the issues.
- Working on Java and .net based applications debugging.
- Work on incidents associated with failed automations.
- Create problems (bugs) tickets for issues identified with automation.

Project # 4:

British petroleum (UK)

- BP is one of the world's leading integrated oil and gas companies in UK.

Project	Infosys - BP AWS Migration Projects
Client	BP
Role	AWS Migration
Duration	Feb 2019 to Aug 2019

Project Description:

British Petroleum as decided to migrate all the existing applications on the on-premise servers in data-center to Cloud (AWS/Azure). Which includes assessing the current setup of the application and migrating the application to the new cloud environment and testing the application in cloud environment.

Responsibilities:

- Responsible for analyzing the current setup of the application and preparing assessment report covering all the scenarios and creating the plan for future setup
- Coordinating with offshore/Onsite team for migration of the project.
- Communicate with application users/ business user.
- Analyze all requirement of the application like memory size, OS and so on.
- Involving in scrum calls and meeting deadlines in in finishing the sprint on time.
- Creating the deployment plan of the application which includes the deployment of application to new cloud server with minimum/no downtime and testing the application.
- Communicating with user / stockholders / customer related to change the code or another activity related to the application.
- Selecting the best available cloud solution based on the assessment of the application.
- Creating the new future environment in the cloud based on the BP policies.
- Modify Cloud Formation Template to create CE (Cloud Environment) for each application.
- Provision Non-Prod Cloud Environment (CE)
- Placement of All relevant requests (Firewall, DB, DNS, Latest Software, Licenses etc.)
- Prepare deployment plan - Non-Prod
- Application DB Migration to DBaaS for Non-Prod (Dev/Test/OAT)
- Application Deployment on the Non-prod (Dev/Test/OAT)
- Web based application code refactoring.
- Migration of the applications to cloud.
- Raise RFC for bubble testing.
- Performance testing of the application & issue fixing.
- After application is migrated to cloud, initial support of the application is handled by us and later on knowledge transfer is done to existing support team.
- Merged release branches to the trunk after the production release and resolved the conflicts if any during the merge in subversion.
- Involved in migrating from SVN to GIT.
- Create and setup automated nightly build environment for java projects using maven.
- Build script using MAVEN build tools in Jenkins to move from one environment to other environments.
- Developed, maintained and distributed release notes for each scheduled release.
- Kept track of all releases and request of the developers through infrastructure management tool.

Project #5:

Project	Wipro - British petroleum (UK)
Client	BP
Role	DevOps Engineer
Environment	GIT, Maven , Jenkins, Tomcat, AWS cloud, ANSIBLE, SalesForce

Duration	Aug 2017 to Dec 2018

Description:

- BP want to create an online case management software to transform how people interact with the technical functions teams. Transform the interaction between the regions and the central teams.
- BP need a centralized resource that allows the information to be accessible by everyone.

Responsibilities:

- BP GWO application user interface design into HTMLs based on the wireframes
- Working with Scrum and Agile Environments for regular cadences of work
- Responsible for installing Jenkins master and slave nodes
- Configured Git with Jenkins and schedule jobs
- Using Maven to perform Software Builds
- Cross Browser compatibility testing and fixes (All browsers)
- Coordinating with offshore/Onsite team for development of the project.
- Participating in Agile daily stand up meeting and retrospective meetings.
- Performed routine updates, upgrades and overall maintenance of website/application/products.
- Involved in unit testing and bug fixing.
- Application Deployment on the Non-prod (Dev/Test/OAT)

Project # 6:

Project	Wipro - BP AWS Migration Projects
Client	BP
Role	AWS-DevOps Engineer
Environment	Git, Jenkins, Ansible, Chef, Nagios, Jira, AWS, Confluence, MAVEN, Web Logic
Duration	July 2016 to July 2017

Responsibilities:

- Responsible for analyzing the current setup of the application and preparing assessment report covering all the scenarios and creating the plan for future setup
- Communicate with application users/ business user.
- Analyze all requirement of the application like memory size, OS and so on.
- Communicating with user / stockholders / customer related to change the code or another activity related to the application.
- Selecting the best available cloud solution based on the assessment of the application.
- Creating the new future environment in the cloud based on the BP policies.
- Modify Cloud Formation Template to create CE (Cloud Environment) for each application.
- Placement of All relevant requests (Firewall, DB, DNS, Latest Software, Licenses etc.)
- Prepare deployment plan - Non-Prod
- Web based application code refactoring.
- Migration of the applications to cloud.
- Raise RFC for bubble testing.
- Performance testing of the application & issue fixing.
- After application is migrated to cloud, initial support of the application is handled by us and later on knowledge transfer is done to existing support team.

- Merged release branches to the trunk after the production release and resolved the conflicts if any during the merge in subversion.

Project # 7:

Project & Client	Wipro - MANTA Application, BP marine business support and development
Client	BP
Role	L2 Support Analyst & DevOps Engineer for business automation
Environment	Jenkins, linux/Unix, shell script, Java, SQL, Web services
Tools & Software	Putty, TOAD, BMC Remedy, WINSCP
Duration	June 2015 to June 2016

Responsibilities:

- Responsible for writing Shell Scripts as a part of Continuous Improvement.
- Responsible for creation of orders in Manta (internet facing order management system used by BP Marine whose Front end consists of configured and customized Asera platform) Test to solve the issues in production.
- Responsible for analyzing the missing file and cause of error while loading of files in server during POI.
- Looking and doing root cause analysis on the batch failures associated with the scheduled jobs
- Monitoring and taking care of all scheduled jobs in different production
- Responsible for running batches, streams and programs according to the need for fetching the required data from the tables.
- Resolving issues as per SLA, which are logged in BMC Remedy tool.
- Using Remedy Ticketing Tools to check for any logged ticket and resolve issues within predefined SLA defined by the client.
- Worked on CR's according to the client requirement from time to time
- Performing DR activities on all the servers.
- Implement branch and merging techniques for major and minor releases including patch releases.
- Performing deployments to multiple environments like Dev, QA, PER, UAT &Production environments.
- Writing a Linux Shell Script and schedule in the respective run levels for automate day-to-day activities such as auto start application server, web server, log rotate and removing the old logs.
